

## Technically Speaking

Zhaohui Su<sup>1</sup>

School of Public Health, Southeast University, China

Sometimes the techies can be quite absurd,  
And it has nothing to do with  
What's on our shirts.

A “cache” is not  
Something one hides,  
It's fast memory instead.

The “cloud” seldom involves  
Any rain,  
It is rather a network of data centres.

The “edge” is not a cliff  
That one needs to fear,  
It is computing where the user is near.

The “tokens” are not meant  
For slot machines,  
They are data pieces that AI machines glean.

Attention is all we need, perhaps,  
Yet communication, too,  
Is key.

An algorithm is nothing  
Without its logic,  
Which, by default, is part of our values.

---

<sup>1</sup> **Zhaohui Su**, PhD, is Professor in the School of Public Health at Southeast University, China. Recognized among Stanford's Global Top 2% Scientists, her research spans digital health, AI, and mental health. Bridging medicine and the arts, she is a published poet whose narrative medicine works appear in high-impact journals including *JAMA Oncology*, *Health Affairs*, *Academic Emergency Medicine*, and *Arts & Health*. Her creative and scientific scholarship positions her at the forefront of interdisciplinary healing and inclusive health solutions. Email: szh@seu.edu.cn

A model is nothing  
Without its data,  
Which, by default, are part of our stories.

A technology is nothing  
Without its infrastructure,  
Which, by default, is part of our communities.

An application is nothing  
Without its users,  
Who, by default, are our people.

Be it techies to dummies, geeks to civilians,  
We need to speak to communicate,  
Communicate to persuade.

An idea is nothing  
Without its doubters,  
Who, by default, are part of our weather.

A change is nothing  
Without its challengers,  
Who, by default, are part of our climate.

An innovation is nothing  
Without its supporters,  
Who, by default, are part of our lights.

A revolution is nothing  
Without its believers,  
Who, by default, are part of our universe.
